

4 codes that make AI teach you anything

Type a code at the start of your message, then the topic. Use them in this order on anything new. Tested in ChatGPT (Free), Claude and Gemini on 18 October 2026.

1 ELI5: understand it

ELI5: how does compound interest work?

"Explain like I'm five." No jargon, one everyday example. Use it on the one idea you don't get yet.

2 80/20: know what matters

80/20: learn Excel

The 20% of the subject that gets you 80% of the way, and what to skip for now. Keep the word "learn": without it, Gemini explains the 80/20 rule instead.

3 Mind map: see how it fits

Mind map: the French Revolution

The whole topic as one map, the main idea in the middle and its branches around it. Shows you what you don't know yet.

4 Quiz me: make it stick

Quiz me: photosynthesis

Questions, then feedback on your answers. Answer before you look. Testing yourself beats rereading: Roediger & Karpicke, 2006; Dunlosky et al., 2013.

Answers vary between runs and accounts. Check anything important (health, legal, money) against a primary source. ChatGPT, Claude and Gemini are not made by webridgeAI.
